

anti-human CD26 purified**Cat-No.: H12425 0.1 mg****Clone:** 22C3**Specificity:**

This clone has been derived from hybridization of SP2/0 cells with spleen cells of a BALB/c mouse immunized with a human T-cell clone. This antibody has been clustered to in one of the international Workshop on Human White Cell differentiation Antigens. The monoclonal antibody is directed against the CD26-antigen, which is expressed on human activated T- and B-cells.

Isotype subclass: Mouse IgG1**Form:**

Ascites fluid of tumour bearing BALB/c mice. Ammoniumsulphate precipitation and ion exchange chromatography.

Physical state: Liquid**Buffer/Additives/Preservative:**

PBS containing 15mM sodium azide, pH 7.4

Expiration date: The reagent is stable until the expiry date stated on the vial label.**Storage conditions:** Store at 4 °C. For long-term storage aliquot and store at -20°C. Avoid freeze/thaw cycles.**Application:**

Detection of activated T- and B-cells. Methods: Indirect immunofluorescence staining with analysis by flowcytometry or fluorescence microscopy.

Warning:

Sodium azide is harmful if swallowed (R22). Keep out of reach of children (S2). Keep away from food, drink and animal feeding stuff (S13). Wear suitable protective clothing (S36). If swallowed, seek medical advice immediately and show this container or label (S46). Contact with acids liberates very toxic gas (R32). Azide compounds should be flushed with large volumes of water during disposal to avoid deposits in lead or copper plumbing where explosive conditions can develop.

This material is offered for **research only**. Not for use in human. For in vitro use only.
